Plasma Rope

Rethinking Temporary
Piping Systems Safety

Why Plasma Rope?

A rupture in a flowline can unleash immense force, causing pipes to whip uncontrollably and endangering personnel and equipment. An engineered restraint system, using plasma rope, secures temporary piping, preventing excessive movement during a failure.

This essential safety measure reduces risk to employees, limits damage, and ensures the reliable operation of oil and gas sites.

- Up to 85% lighter than traditional steel wire ropes and chains
- Customized and locally assembled product, made with North American produced material

Sales & Rentals Available
