FLOWLINE RESTRAINT SYSTEM

A rupture in a flowline can unleash immense force, causing pipes to whip uncontrollably and endangering personnel and equipment. An engineered restraint system, using plasma rope, secures temporary piping, preventing excessive movement during a failure. This essential safety measure reduces risk to employees, limits damage, and ensures the reliable operation of oil and gas sites.

WHAT MAKES OUR PRODUCT STAND OUT AMONG THE REST?

- › Professionally Engineered system, certified through regulatory standards
- › Up to 85% lighter than traditional steel wire ropes and chains
- › Half hitch set up that offers streamlined installation
- › Quick and efficient assembly leaving you with less downtime
- › In-house manufacturing and testing facility
- › Low maintenance fees helping you keep project costs down
- › A customized and locally assembled product, made with North American produced material

Sales and rentals available.
